

What makes up the Mobility Edge™ Platform?

A unified & dynamic platform design to reduce complexity to build, deploy, manage and extend the lifecycle of mobile solutions across customers' enterprises better, faster, with less risk, & less cost.

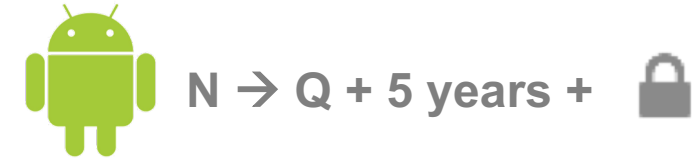

System on Module (SOM) Android-based Platform

- Single certified module that includes CPU, memory, WWAN, WLAN, BT, NFC, Zigbee
- SOM is the core of all global mobile computing offerings moving forward:
 - Handhelds, VMC, Tablets, etc.
 - Various form factor types (touch, key, sizes)
 - 3 Device classes based primarily on AIDC performance and/or reliability
- Qualcomm commitment to SOM availability through 2023

Development, Deployment & Performance Optimizing Tools

- Some of our Zebra-differentiated Tools:
 - Deployment Tools
 - Staging Hub
 - Set-up Wizard
 - Performance Optimizing Tools
 - Wireless Tether & Find My Device
 - Voice Wedge
 - ML/AI-based learning engines for optimization in battery, decoding and dimensioning

Android Security Support & Services

- Android support from N to Q (4 versions) on a single piece of hardware
- 5+ years of support for security updates following last OS version release
- Honeywell Cyber Security
 - Cyber Security development checkpoints
 - White hacker team to identify vulnerabilities throughout the development process and before launch
 - Product Security Incident Response Team (PSIRT) to rapidly respond to security issues

Customer Benefits

- Flexibility and reduced costs to deploy additional device form factors and classes due to no added dev or cert costs given common module/sw image
- Reduced TCO via enterprise lifecycle with HW, SW and OS support through 2025
- Reduced cost and time to deploy, manage and optimize mobile devices via a complete suite of tools that are common across the entire portfolio.
- Optimized performance over time via learning engines
- Reduced total cost of ownership (TCO) via enterprise OS lifecycle support that extends through 2025
- Peace of mind via security patch support and Honeywell's Cyber Security capabilities

Reduces complexity and extends the lifecycle of mobile deployments
