

HONEYWELL TRANSPORTATION & LOGISTICS MOBILITY SOLUTIONS

Explore this guide to discover how you can drive affordable gains in productivity, efficiency and accuracy by using our industry-leading transportation and logistics (T&L) products.

EVERYTHING BEGINS THE MOMENT YOU PICK UP A PACKAGE.

1 At a parts warehouse dock, multiple packers load the truck using a **Thor VM1A Vehicle-Mounted Computer**, as well as the **CK65 mobile computer**.

Each device is enabled by **Mobility Edge**, allowing the transfer of business-critical data from the warehouse team to the delivery team in a seamless format.

The driver has access to this data so he can move efficiently through his route.

CHECKED AND DOUBLE-CHECKED.

2 A supervisor using the **CT60 Mobile Computer** knows in real time when loading is complete. Then he can check that every case is properly stacked and addressed.

3 A driver using the **CN80** or **CT60 Mobile Computer** can see his schedule and know when every box is loaded, helping him be more productive during his route. **Dynamic Routing & Tracking** solutions use multiple technologies to provide route planning that increases efficiency and reduces driving time.

MOBILE INTELLIGENCE TRAVELS WITH THE DRIVERS.

4 At every stop, the driver's **CN80** or **CT60 Mobile Computer** identifies the boxes he needs to unload and enables him to scan the box so he can confirm the delivery and update the database. If there is any issue with the delivery, the mobile computer can track it.

Honeywell as a Service (HaaS) ensures these products remain within reach by requiring no upfront capital outlay. And by allowing payments to be made on a monthly basis, you have the flexibility needed to maintain your competitive advantage in the market.

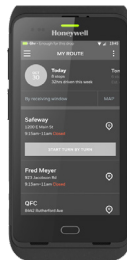

STEP INTO THE FUTURE WITH MOBILITY EDGE.

THOR™ VM1A VEHICLE-MOUNTED COMPUTER

Built for all-day productivity. The large 8-inch screen can be mounted and removed in seconds for quick shifting between vehicles as workloads change.
